Your Solution To Testing Instrument

### PC-024

#### Concrete Test Hammer Type N

The PC-024 Concrete Test Hammer is the traditional instrument used for the non-destructive testing of hardened concrete. This concrete test hammer is intended for testing the quality of concrete in finished structures such as buildings and bridges. Supplied complete with plastic carrying case and carborundum stone, the hammer is suitable for testing concrete with compressive strengths of 10 to 70N/mm<sup>2</sup>. This easy-to-use instrument provides a quick and simple test for obtaining an immediate indication of concrete strength in various parts of a structure.

- Impact energy: 2.207J (0.225mkg)
- Accuracy: 80±2
- Standard: BS1881:202, ASTM C-805

### PC-025

#### Rock Test Hammer

This rock test hammer is intended for testing low-strength construction materials. It is suitable to test small sized, sensitive and thin walled materials. It is also suitable to test rock core samples.

- Impact energy: 0.735J (0.075mkg)
- Accuracy: 74±2
- Standard: BS1881:202
