- Detecting uninvited guests

The BO22 is a procedure in the medical sector referred to as "minimal invasive operation" can also be carried out at home in daily life: The effective and targeted "examination" by means of an endoscope. For this purpose, the small camera of the mini videoscope BO22 is inserted into the interior of poorly accessible hollows. All your recordings appear on the 3" LC display – live and in colour.

The BO22 ideally suited for facility managers, technicians or private users. If a quick and reliable endoscopic visual inspection is required, the BO22 is the perfect aid. A 3x zoom enlarges the view. The useful image rotation function allows to turn the image by 180°.

The BO22 is a cordless operation, the device is highly flexible and user-friendly. The display comes with date and time indication and provides a precise documentation of the time. The mini videoscope BO22 is supplied as a complete set in a handy transport bag, including all necessary equipment for immediate use.
